

SUSTAINABLE VILNIUS

European Green Capital 2025

Officially recognised for turning sustainability into real, city-wide action – not ambition on paper, but results on the ground.

Climate neutral by 2030

Clear targets, practical policies, and measurable progress make Vilnius a credible choice for future-focused events.

Green city, human scale

With nature woven into everyday urban life, sustainability here enhances wellbeing rather than complicating it.

Sustainable mobility

Electric public transport, cycling networks, and a compact city centre keep delegate movement simple and low-impact.

Smart, inclusive innovation

Open data, digital tools and active citizen engagement position Vilnius as a living lab for sustainable solutions.

Events with lasting value

In Vilnius, sustainability is not just an add-on – it shapes how events are hosted, experienced, and remembered.
